

Introduction of “Earth Club”

Hi, Boys and girls, I introduce Earth Club to you in today’s class. Earth Club is established for Disaster prevention in schools. As you know, when disaster occurs in the class room, what shall we do? Earth Club considers our behaviors in a disaster. Shall we do an activity of Earth Club for example of Earthquake in this class?

Hi Teacher, I know it. We should hide under the table to protect my head and body from falling objects. And after shaking stopped, we should go out the class room immediately. But this evacuation needs the rule, because all of the students run into the entrance at the same time, we cannot go outside and besides some of us are injured.

Hi Teacher, I jointed in Earth Club before. In the Club, we not only the create the evaluation rules, but also try the evaluation drill from the class room. In the field of the school, my parents were waiting for me and I went to my home with parents. My parents also told me this activity remind me how to save you as paraments again. And I also created town map that shows the risk points to evaluation.

JICA (Japan International Cooperation Agency) has a technology transfer project to PWD (Public works department). This project visit Armanitola Government High School to establish Bosai Club. And the members of Earth Club develop their actively to inform their good samples to other schools.

I think the good point of Earth Club is managed by ourselves and the dissemination of the activities are done by ourselves. Considering the disaster prevention, we are main characters. We would like to continue these activities, it is sure we can save ourselves

Shall we do the evaluation drill? Oh, Earthquake comes now. Go into the under the table, Wait Please evacuate from nearside the door. Keep the order, now your turn. Don't worry! I am here! I evacuate last. Please close your mouth not to breathe disaster dusts.

Hi, Boys and girls, Good Job! Please understand that the preparation is very important for disaster prevention. Please consider how can we make preparation. I hope you can discuss this drill and disaster with your families. And if you have small sisters or brothers, please consider how to protect them as families.

Member of Earth Cub

Evaluation drill

Earth Club seminar at another school

New earth club at another school

Hand out the booklet from JICA project

School principle has a great contribution to earth club.
